Abstract

This paper is based on a curious set of consciousness experiments at the Pyramid Valley International in India by Anil Sinha, an engineer and consciousness researcher. This set of experiments produced some results of immense practical application for the society, but which were hard to explain from a purely scientific perspective.

Dr. Amit Goswami, Ph.D., who is a quantum physicist and consciousness researcher of global eminence, decided to take interest in the data produced in these experiments and examine them in the light of the current state of development of quantum physics. Additionally, Dr. Goswami viewed the data utilizing his interpretation of its implications for how consciousness has to be the central piece in the reformulation of the worldview that would help create a more compassionate and sustainable life on planet earth.

Dr. Goswami examined the validity of this data from the perspective of quantum science and proposed a direction for further research in this area that would help create practical solutions based on vital energy technologies.

Key words

Radionics, Pyramid, Sacred Geometry, Quantum Science, Scalar Waves, Pyramid Valley, Consciousness

About the Authors

Anil Kumar Sinha is an engineering and management graduate with over 40 years of rich and diverse professional experience in Manufacturing, IT Solutions and Change Management. His current pursuit is Conscious research and Vital energy applications. He is a part of the foundational team of the Quantum Activism Vishwalayam and the co-founder of a unique Meditation Lab at Pyramid Valley, Bangalore.

Amit Goswami-Ph.D. discovered the solution to the quantum measurement problem and developed a science of experience. He developed a theory of reincarnation and integrated conventional and alternative medicine within the new quantum science of health. He is the author of numerous books. Amit started the quantum activism movement, establishing a transformative education institution, Quantum Activism Vishwalayam, based on quantum science and primacy of Consciousness.

The Radionics Machine uses a Tesla coil,

1. INTRODUCTION

1.1. Experimental Background

At the Pyramid Valley International Meditation Center in Bangalore, India, consciousness researcher Anil Sinha carried out three specific experiments using

1. The well-known but controversial technology of Radionics, which is described as a form of healing using the sensitivity of a healer and an instrument based on the mysterious “Tesla waves”; and
2. The sacred geometry of the pyramid structure based on the golden ratio and cardinal orientation, which is said to gather and concentrate cosmic energy; yet another controversial idea.

which is supposed to generate scalar electromagnetic waves. Such waves are not allowed, according to the standard and established Maxwell’s theory of electromagnetic waves. Nevertheless, the makers of the Radionics Machine claim that the machine produces such a field and the waves of this field are indeed scalar. They further theorize that all matter—living and non-living—has an Intrinsic Data Field (IDF) associated

with it. As a note, in our research we will deal only with living matter.

Finally, they claim that the Tesla waves of the instrument, called an INTRINSIC DATA FIELD ANALYZER, can be modulated by these IDFs and subsequently the IDF can be balanced (or healed when applied to the IDF of the living). The healing does require the involvement of a human being, who will call the researcher throughout this paper.

The researcher begins with a “diagnosis” of what is wrong with the IDF of the subject and what is missing in it as compared to a healthy IDF. This is done by first comparing it with a database of stored IDF signatures in the machine software (for which they use their own personal computer). Second, the researcher “heals” the IDF from its deficiencies by adding what is missing again from the machine’s database. All this can be done at any distance without a physical connection between the researcher and the client. A photograph or a physically correlated sample such as a hair, soil, plant seed or similar items. can be taken of the living object and fed to the Radionics Machine input; this is enough for modulating the machine’s waves with the object’s IDF. The modulated wave is then diagnosed and healed with the machine and researcher at a distance. And this approach somehow heals the object.

There are four separate mysteries here from the conventional “materialist science” (everything is matter) point of view.

1. As stated above, scalar wave—the carrier wave in this case—is an unscientific idea;
2. Solid objects do have intrinsic vibration (basically sound) frequencies; however, they need to be converted to electromagnetic waves before they can piggyback on a carrier wave; which is what modulation is about. An example is your conventional radio: the sound waves from a musician is converted into electromagnetic waves first at a radio station before they modulate the carrier waves; after the modulated waves do their travelling,

they are demodulated at your radio receiver, which plays back the original music;

3. To further add to the mystery, there is no physical proof that a signal (the modulated Tesla wave) actually travels through space back to the target; the healing must be regarded as healing-at-a-distance without the use of any physical signals; by conventional scientific standards this is impossible.
4. The role of the researcher is not entirely mechanical like that of the Newtonian laboratory scientist; the manufacturers do emphasize the need for sensitivity on the part of the researcher. In fact, to their credit, they sell the machine only as a research instrument.

Anil became curious and when he had the opportunity, he used the instrument for three separate experiments. Each experiment had its own intrigue and success; in some of the measurements he also used the pyramid in ingenious ways and improved upon the success achieved. When he became aware of Dr. Amit Goswami’s work and of quantum science, he immediately saw that some of the intrigue of his data can be vaguely explained by the ideas of quantum science.

The three obviously useful ideas that quantum science brings are:

1. Nonlocality or signal-less communication; in quantum physics when two material (usually sub microscopic) objects are correlated or entangled, they can communicate without exchanging signals through space and time; this is called nonlocal communication and has been experimentally demonstrated to occur.^[11]
2. Quantum science explains our experiences of feelings as experiences of vital energy. According to quantum science, all living objects consists of:

- a. Physical hardware—the biological organs that follow laws of physics and
 - b. Nonphysical vital software that follows the laws of a new science—quantum science. The vital epigenetic software guides the functions of biological organs by activating the appropriate genes for making the right proteins for organ function. The origin of the vital software can be traced to the concept of morphogenetic fields introduced by the biologist Rupert Sheldrake. ^[9]
3. In quantum science, consciousness is the ground of all being. From this, all objects of experience—sensing, feeling, thinking, and intuition—are quantum possibilities for consciousness to choose from. In the process of choosing, consciousness splits into an observer and the observed—subject and object. Through this split, the subjective role played by the researcher/observer is easily understood. ^[10]

In this way, there is something like an IDF for a living object, except that it is nonphysical and nonlocal. It is the nonlocality of the living IDF that convinced Dr. Goswami that quantum science will explain how Anil's set up works.

Anil has been presenting his intriguing data ever since, suggesting in the beginning of his presentation that his experiments have bearing with the quantum worldview in that:

1. They support the quantum worldview, the idea of nonlocality, the importance of a conscious observer or observers, and
2. The details of the experiment perhaps may be completely explained by quantum physics at some point. Anil then presents his data emphasizing the fact that machines such as radionics are allowing measurement of what was once thought as

immeasurable and the development of a valuable healing technology.

After one of his recent presentations, one listener voiced objection. The gentleman complained that Anil was presenting his research as though a machine can heal us; that instead of utilizing a medicine, we can simply feed the photograph of the medicine into the machine, then feed a photograph of the patient into the machine, and once this input is received the machine does the rest. Where is consciousness in all this?

Dr. Goswami, had been listening to Anil's presentations and liked his data; it does provide support for the quantum ideas of nonphysical vital energy and also of nonlocality. But he also thought the experiment seemed to engage controversial machines in its details. Moreover, he knew that some of the controversies surrounding Radionics and Pyramids are really difficult to accept as scientific (such as the idea of scalar waves and a nonliving pyramid creating vital energy) and he did not want to get into that controversy. However, the comment above was presented to him and he was forced to engage with the details. This paper is a result of that engagement, which has been very rewarding. How rewarding?

2. Setting the Context

Let us summarize the premise of our work:

1. Radionics does not generate anything nonphysical; it generates normal vector electromagnetic waves coming from opposite directions, creating a standing wave
2. There is no such thing as a scalar wave ^[6]. However, the amazing genius Nikola Tesla, long before Kirlian photography, intuited that there is a bioelectric field of all living beings. He also understood that these fields do become kind of "modulated" by the vital energy movements of the living, except that the modulation is a quantum effect of a nonlocal correlation; we call it quantum modulation;

3. The observer's sensitivity does play a crucial role in the use of the instrument;
4. The machine can represent the medicine to a substantial extent, but it does not propose to replace the medicine by any means;
5. The pyramid is not a living object; in no way can it generate vital energies of living and it does no such thing. However, it does amplify the cosmic vital energy widely talked about in spiritual wisdom traditions. Using quantum science, today we do have a science for such cosmic energies.

And the Radionics makes the use of the pyramid even easier and more versatile.

6. Together, this combination of a Radionics Machine plus a pyramid blended with quantum science's theoretical back-up will lead to the development of a much needed new vital energy technology.

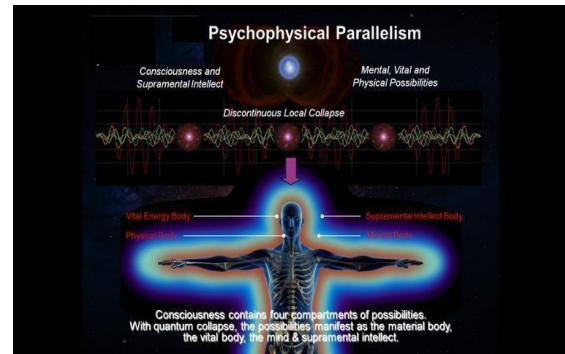

The great physicist Nikola Tesla once said something to the effect that one day human beings will be able to measure and harness nonphysical energies and that this day will signify a crucial take off of human civilization. It is very fitting that an instrument built around his ideas—the Radionics Machine—is precisely a step in that direction, once we use quantum science to demystify it and understand how it works. We dedicate this paper to Nikola Tesla.

2.1. Theoretical Framework and Experimental Tools

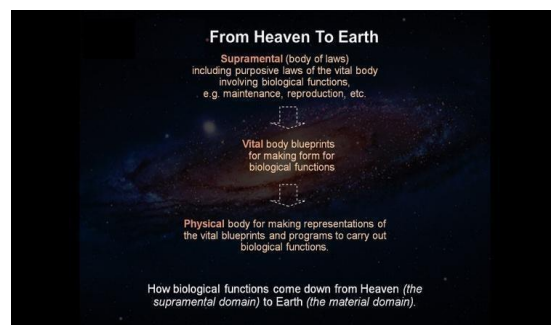

2.1.1. The Quantum Worldview

In the Quantum worldview ^[9], proposed from the perspective provided by the principles of Quantum science, we discover some very fundamental truths:

1. Consciousness is the ground of all being. Nothing in the entire existence can be defined without giving cognizance to the consciousness- the observer that manifests possibilities into actualities.

2. The true nature of reality can be understood only through a “downward causation” model ^[11] where consciousness activates the entity

called *the brain* and then identifies with it, splitting itself into a subject and objects for it to experience itself.

3. There are four compartments of quantum possibilities giving us four different worlds of experience: sensing—the physical world; feeling—the vital world of life; thinking and meaning—the mental world of the mind; and intuiting and archetypes—the supramental world of human values.

4. Human beings have four different bodies made of our experiences of the four worlds. Of these, only the physical gives us the hardware—the structure where the other three bodies of experience are embedded as software. In this way, humans and animals have a vital body made of this vital software associated with the body organs' functioning. Additionally, we have the mental body consisting of the mental software that is associated with the brain cortical hardware. And then there is the supramental body, also called the soul, which consists of higher mental and higher vital software made of our intuitional/archetypal experiences.
5. Each software has conditioned movements and creative movements that bring on new software.
6. Healthy functioning is functioning with both conditioning and creativity.
7. Creativity involves alternating focused work and relaxed being—do-be-do-bedo.

2.1.2. The Radionics Machine

Here is how the manufacturers describe the technology known as Radionics, for which the current scientific acceptance, based on the known theories, is rather poor. Due to this, it has been mired in controversies and is often labelled as quackery.

Radionics is commonly defined as: "a form of healing using an instrument and the sensitivity of the practitioner to detect and rectify any imbalance in the energy fields

which are associated with all forms of life."
~Roger
Calverly [5]

It can be thought of as a method of detecting and balancing the information blueprint of any living system remotely. It is done by sending appropriate information to that system *radionically*.

2.1.2.1. Technology

First let us examine how the technology, which comes across as a bit of science and a bit of art or skill, is described by the vendors and other explorers and practitioners.

Representative schematic diagram of a Radionics Machine

3 dial tuning circuit based on Mr. conrath's original. See year 2011 V1.1

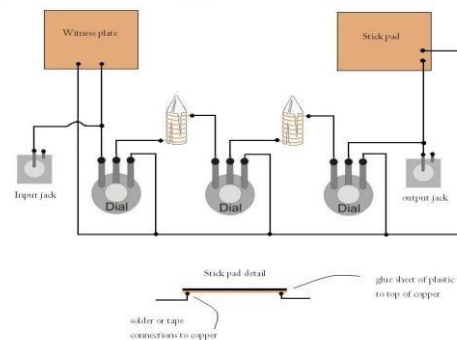

Fig 1 Radionics Schema
2.1.2.2. History of Radionics

Radionics originated out of the research of Dr. Albert Abrams, professor of medicine at Stanford University. He was born in San Francisco in 1863 and became one of the most highly qualified specialists of his day. Abrams asserted that he could detect energies or vibrations that are emitted from healthy and diseased tissues. He invented devices that he said could measure these energies and systematically interpret them as signs of health or disease. These laid the foundation of the modern Radionics Machines.

Subsequently, Radionics has been developed and improved upon by numerous other researchers including Ruth Drown, George de la Warr, T. Galen Hieronymus, Malcolm Rae, David Tansley, Dr. Bruce Copen, Dr. Willard Frank (developer of the SE-5, see below) through the last 100 years.

RADIONICS is thought to be operating through Scalar waves that “seem” to help exchange information non-locally. [4]

Scalar waves are also referred to as TESLA waves or Longitudinal waves. Nikola Tesla called them non-hertzian (without frequency) waves. He took inspiration from the work of Maxwell himself, who first talked about the Scalar wave energy. Tesla conducted experiments purported to transfer electrical energy at a distance with longitudinal waves or Scalar waves.[3]

He claimed that these waves:

- Can be created as a stationary wave by two similar frequency waves cancelling each other when they meet from opposite direction
- Are capable of penetrating any solid object including Faraday cages
- Can pass through the earth with no loss of field strength and travel faster than light
- Don't decay with time or distance
- Can be used to transfer Information and Energy for various applications

One of the popular machines based on the Radionics principle is the SE5-1000 IDF Analyzer. This is the one used in the experiments reported here.

2.1.3. SE-5 1000 Intrinsic Data Field Analyzer

Description of the technology

(<https://alteredstates.net/index2.php?vibrosau>
[n/](#))

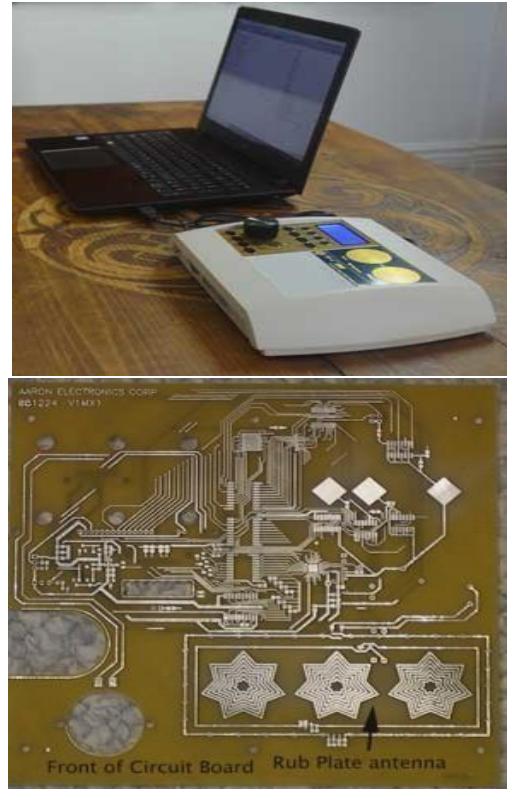

Fig 2 Radionics Machine SE5-1000

The SE-5 is an experimental research electronic instrument designed to accurately detect and help balance Intrinsic Data Fields (IDFs). Intrinsic Data Fields are described as informational fields that are the basic blueprints for all living (and nonliving) things.

The SE-5 is a consciousness interactive instrument that has been used experimentally by many researchers to detect and balance the IDFs of plants, animals, minerals, and virtually all animate objects. Some people have experimented with the IDFs of psychological states, Chakra balancing and other intangible areas. IDFs are sometimes referred to as subtle informational fields and are the fundamental blueprints of the third (and other) dimensions. **2.1.3.1. Operating Method**

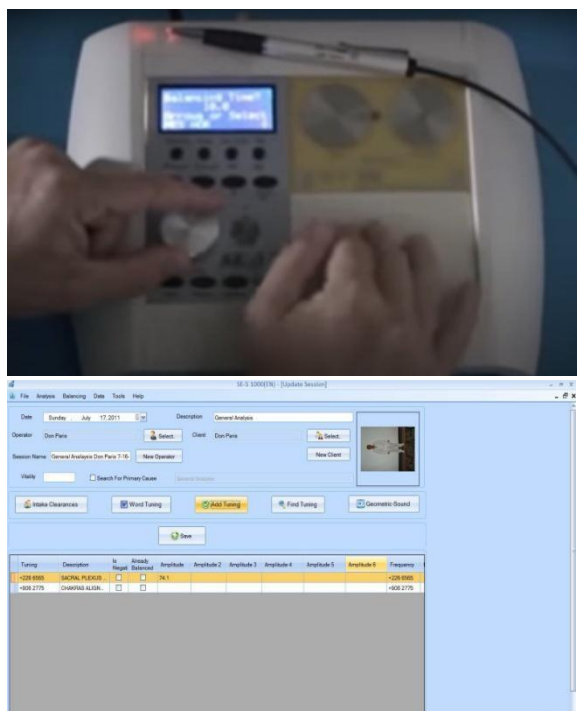

Fig 3 SE5-1000 Operation

The object (commonly called a witness) may be a human, plant or any other object that needs to be healed and is defined as a client in the associated software. A digital picture of the object is inserted, or sometimes a physical sample (seed, leaf, soil, water or human hair etc) is placed on an “Input Plate” as a representative sample.

2.1.3.2. How the Radionics Software is Made

Being able to measure the presence of a particular energy rate or signal allows one to observe changes in that signal resulting from application of balancing energy, be it from allopathic, homeopathic, radionic, laying-on-offhands or other sources of therapy. ^[1] Researchers report being able to differentiate between signals from normal or healthy tissue and from diseased or potentially abnormal tissue. Obviously, when measuring human signals, the healthy energy rates would be

present to a normal degree, while the abnormal signals would be absent or read very low.

Where abnormal signals are present, the healthy signals are generally weak. It is reported that when abnormal signals are corrected, the healthy signals return to a normal level. Conversely, when healthy body signals return to normal levels, most abnormal signals tend to decrease.

The imbalanced or disease-like signals appear to be reduced by application of proper balancing energy. The research charts and rate book numbers for conditions show instrument settings to signal-process the energy from the subtle bodies to provide experimental balancing energy.

Tunings are also available for healthy signals to allow experiments to either boost or balance their amplitudes where the presence of imbalanced signals or pathogens appears to have reduced the normal readings.

Researchers claim to be able to detect the presence of abnormal radiations in the subtle body signals using instruments, and to measure the intensity of such imbalances. The amplitudes of healthy body signals are claimed to be sensed in a similar manner.

Where imbalanced energy is present, researchers have reported correcting such imbalance by application of the listed energy numbers for the conditions or organs and tissue involved. Analysis after such subtle body balancing has shown the correction of the energy imbalance to have taken place.

2.2. Details of How the Radionics Software Was Used

We select from a database of the several thousand reference tunings, also called “rates” (a sequence of numbers), a few that represent different aspects or attributes relevant to the object or the issue at hand. This selection process is done one at a time, checking each object's current level of balance by rubbing our fingers, as shown in the diagram, while at the same time turning the amplitude knob until we feel a “stick” sensation on the finger. The number on the display at the time we sense this stick is selected and entered as a value by the machine in the client program.

At the end of this process, called Analysis, we have a list of selected tunings that together make a program or a session. ^[2]

Once the session is ready, the software is called upon to run in “Balancing” mode for this session, which means that it simply brings up each tuning one at a time while the sample or client representation is displayed as being present as a witness. The resonant frequency being fed to the antenna coil interacts with the frequency being generated in correspondence to the numeric code of the tuning.

The other variable added is that the number of repetitions of a tuning, the delay between bringing up two tunings and the number of cycles, are also varied for each balancing session. These parameters for each session are also determined by the same process of rotating the amplitude knob while checking for a stick on the antenna plate.

If we wish to repeat a program over several days, it can be scheduled in the software to

start at a chosen time every day. This can be an unattended process.

Another interesting thing in working with radionics is that we can create our own tunings that represent the energy attributes of any physical objects that are known to have special vibrational qualities such as a crystal, a medicine or special geometric shapes like a Shri Yantra or a Pyramid. These tunings can be added to a session in the same way as any other tuning. They are called reagents.

In fact, for his experiments Anil created a set of tunings to represent the mega-meditation pyramid available at Pyramid Valley as a reagent. This was done because there were many experiences of spiritual seekers there who believed that the pyramid had some special healing powers. Anil used to add this reagent in most of the healing programs whether for humans or for any other objects.

2.3. Pyramid

Harnessing the Benefits of Sacred Geometry

“Shape is really a pattern of energy movement frozen in space, a pattern which nature gives a specific power”- Dr. Ibrahim Karim, Egyptian architect ^[7]

Shape and material are two important variables used in modern technology. The new research in nano-technology makes use of this wisdom. Ancient spiritual traditions harnessed the power of specific geometric shapes for healing humans and the environment. This has been witnessed by the wonderful architectural marvels via the ancient temples, pyramids and so on.

Pyramids are one such sacred geometry form that has fascinated mankind through their sometimes mysterious influence on humans and environment. Their origin and purpose has largely remained shrouded in mystery, but in recent times they have been popularized as a means of helping people meditate and heal. Their effect on the improved preservation of organic material has also been documented through a variety of experiments.

2.3.1. Importance of the Golden Ratio

Two quantities make a *Golden Ratio* in mathematics if their ratio is the same as the ratio of their sum to the larger of the two quantities. It is represented by the Greek letter phi (ϕ) and it approximates to 1.618. It is found as the value to which the ratio of successive pairs of numbers in a Fibonacci sequence converge as you go higher in the series. This ratio appears many times in nature (in plant and flower shapes, human body proportions, and more) and has been liberally used in geometry, art, architecture and so on. This gives rise to a sense of balance and beauty and has been seen to influence our feelings, which is an indicator of its impact on the vital energy movement. It is considered to be brought into use by the Greeks and the letter representing it, *phi*, is named after the Greek sculptor Phidias. The golden ratio also formed a central part of many ancient treaties and architectural systems in India in the Vaastu Shastra and the concept of Mount Meru (*Chhandah-shastra* by Acharya Pingala).

A pyramid shape, based on the golden ratio, has been found to be the basis of many megalithic structures around the world; the most famous example being the giza pyramids

in Egypt. In addition to the ratio, the other architectural principle followed in these pyramids was its alignment to the exact cardinal directions.

Though there are many theories about the purpose that they were built for, many people have experimented with their use for preservation, agriculture, healing and meditation. There is a large size meditation mega-pyramid (160x160 feet base; 102 feet high) at the Pyramid Valley International (referenced above) that has been attracting many meditators over the last 15 years or so. It is our premise that the use of this pyramid for meditation by millions of people over the years has also helped create a special cosmic energy field there.

Since successful preservation experiments using small pyramids have been reported by many people from across the world, the question was raised about the impact of the mega pyramid on a similar experiment. Since it was not practically possible to do an actual experiment inside the meditation pyramid considering its designated purpose, Anil decided to use an option available in the Radionics Machine SE5-1000 to create an IDF tuning representing the energy field of this mega pyramid and use it for a tomato preservation experiment.

3. The Experiments

3.1. Experiment #1: Preservation of Tomatoes

In India, tomatoes are grown in all regions in substantial quantities and usually cause a problem of preservation since they are a seasonal crop and a fast-perishing commodity, especially in the hot Indian weather.

During the crop season there is usually an oversupply and this causes a huge crash in market prices. Many times it becomes unviable for the farmer to take it to the market and storage facilities are expensive with many logistical challenges. So the tomatoes are allowed to rot in the fields and often over half of the crop is lost.

Anil conducted an experiment in preservation by balancing the vital energy fields of sample sets of tomatoes in natural environments without artificial weather control. A setup was created by inducing virtual pyramid energy fields transmitted remotely through a Radionics Machine.

It was observed that under this setup the tomatoes remained fresh and juicy even after 140 days (almost 5 months). This occurred even through the extremely hot months of summer- April to September 2016. The usual healthy life of these tomatoes does not extend beyond 3-4 days.

Fig 4 Tomato Experiment

Later the experiment was repeated with larger quantities and by varying some of the parameters to simulate a real life condition on a farm. Each time it was found to exhibit a

significant increase in the longevity of the life of the tomatoes.

Anil and his team developed a protocol where even in a large sized lot, at least 75-80% of the crop remained in good and usable condition after about 3 months. Interestingly, even the tomatoes that did decay and had to be removed from the lot produced good quality seeds that could improve subsequent crops.

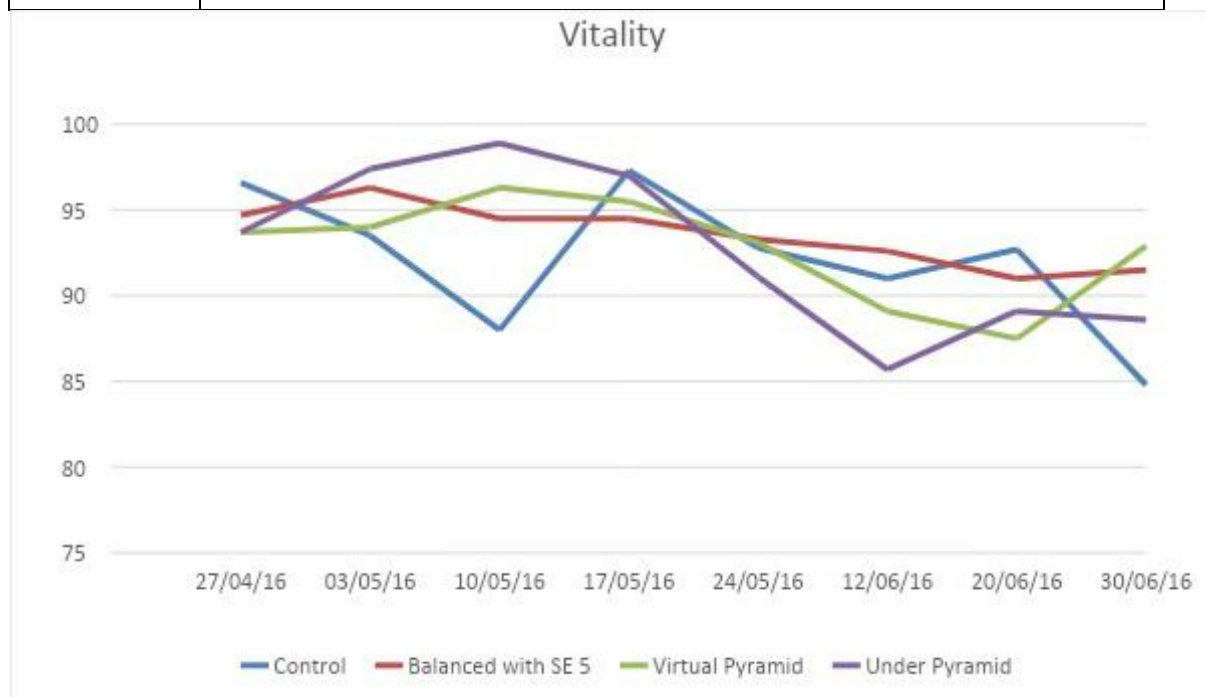

3.1.1. Methodology Utilized:

The research team created the following four variants for this experiment, each containing two tomatoes:

1. Control - Nothing was done
2. Open Pyramid - Tomatoes were placed under an open pyramid of 2' x 2' dimension
3. SE5 native balancing program for food Balancing sessions for the variant 3 and 4 were preservation created once at the beginning and used to be
4. SE5 program using the Pyramid as a run each day for 30 minutes each. reagent

3.2. Experiment # 2: Reviving a Barren Agriculture Field Without Infusing Chemicals

Fig 5 Agricultural Soil Experiment

A vegetable growing plot of approximately half an acre was lying unused as the soil was

3.2.1. Project Details:

completely deficient in nutrients and the farming in-charge was unable to grow anything there.

The Research team set up a configuration of 5 inexpensive open frame pyramids (10ft x 10ft) in the field and balanced the vital energy parameters of the soil, water and seeds using a hybrid model of pyramid energy and radionics transmissions. Only natural manure and pest control measures using cow dung and cow urine, as well as dry leaves and other natural material, was deployed and the land

sprung back to a happy state. It started vegetables within a year.
producing healthy and bountiful crops of

Pyramid + RADIONICS Energy Agriculture Project	
Start Date	9-Dec-2017
Purpose and Methodology	The project was to experimentally determine the effect of Pyramid Energy on growth of plants Physical Pyramid (with hologram sticker, programmed with SE5 stuck inside the pyramid) was placed in the field. Also a suitable SE5 program for promoting healthy crops was added to the protocol
Location	Plot Behind Pagoda Cottages; 0.5 Acres
SE5 Transmission	Every day Transmission at 09.00 AM & 06.00 PM for 15 Minutes each beginning from 09 Dec 2017
Sample	Chilli, Brinjal, Beans, Tomato
Variants	Control, Open Pyramid+SE5 Agriculture Program
Outcome	Soil fertility was revived and healthy vegetable crops were grown without adding any chemical fertilizers or pesticides

3.3. Experiment #3: Making Rain in a Rain Deficient Season to Revive a Dry Lake

Within the Pyramid Valley ashram there is a huge rain fed lake that is largely responsible for charging the underground water table. It may also act as a sink for the negative emotions released by the thousands of people who come there every month to meditate and heal.

Fig 6: Dry Lake Revival Experiment

In 2017 the lake had turned completely dry as the rains had become deficient for the previous 2-3 years. It had remained in that state for more than two years when the team decided to experiment with making localized rains to revive the lake through the power of quantum consciousness.

When they investigated, it was found that the advance weather estimates for that year had predicted deficient rains over that season too. Moreover, the official rainy season was still a couple of months away. The research team took a piece of mud from the dry and exposed lake bed and checked its vital energy and emotional field, using the rain and psychological programs in the SE5-1000 IDF Analyzer. What they found was that the lake seemed to be showing a lot of accumulated anger emotion. A protocol was set up for healing the mud sample from the lake bed for 40 days using a hybrid Pyramid EnergyRadionics combination approach.

On the conclusion of the experiment on the 40th day, the research team returned the healed soil sample back to the lake on a hot muggy day in May of 2017. They chose the day of the full moon to conclude the charging and healing process.

Fig 6: Lake Soil Balancing

Fig 7: Lake starts filling

Fig 8: Lake full in 2 weeks

That same night there were massive rains in the area and the next morning there was six inches of water in the lake that had not been able to hold water through the previous couple of rainy seasons.

The rains continued for the next two weeks and the lake started overflowing. After this the rains came to a halt and the average rainfall over the subsequent rainy season did obey the predictions of the weather department and remained deficient, but the experiment objective was fulfilled.

During the period of two weeks, when the rains were filling the lake, the people living in the ashram had frequently observed a very localized rain phenomenon occurring specifically in and around the ashram while the adjoining village areas were dry.

Another interesting phenomenon happened a couple of months later that helped reinforce the trust in the process. In the month of July, Anil and the Pyramid Valley team noticed that the lake water level had gone down to about half full due to evaporation and water getting absorbed into the soil. A global annual event of the Pyramid Valley was coming up by the end of September and the Chief Engineer there remarked with remorse, "It would have been wonderful if the lake was full at the time of the event." Anil casually asked him, "Should we repeat the experiment?" "Is it possible?" the Chief Engineer asked. Anil said, "Why not" and proceeded to repeat the protocol. Lo and behold, again the rains came, which had become a bit less, and the lake was indeed full at the time of the event.

3.4. Methodology Utilized:

The project was initiated on 3rd April 2017. About a 1 kg sample of mud was dug out from the dry bottom of the lake. It was wrapped in a cloth and placed under a 1' x 1' wooden

pyramid capped with a small 6" x 6" copper pyramid.

This sample was kept under the pyramid for 40 days, until 10th May 2017, which was also a day of one of the most powerful full moons, namely the Buddha Purnima day.

Simultaneously, a "RAIN program" session was created on SE5-1000 with the mud and a photo of the lake as a client/ witness. This program was run every day for 45 minutes during the 40 day period of the experiment. The program had tunings for removing blockages to rainfall and to balance the aura and chakra of the mud sample, as if it were a human being.

Interestingly, the analysis of chakras showed the maximum imbalance in the throat and heart chakras.

4. The Quantum Science of Experiments

4.1. General Aspects

The experiments have several components that need to be explained. First of all, what is the Intrinsic Data Field (IDF) of living objects? If you think in conventional terms, there is nothing electrical that can be transferred and allowed to interact with any electrical healing mechanisms.

Second, the Radionics Machine has two separate components and both need explanation. The first component does an analysis of the IDF of the living object in terms of its current "health" or wellbeing. There is a range of IDF's for each healthy living object; the

designer of the machine has divided this state into several modules and the machine provides you with software for each module. The individual modules are somewhat similar to wave frequencies; and you can think of the healthy IDF as a coherent superposition of these frequencies.

The objective of the analysis is to find out in what ways the current IDF is deficient from its optimum state of health; what specific modules it is missing. Here is where the experimenter's vital sensitivity enters. The experimenter has to determine which of the modules that the machine suggests as relevant are already present in the IDF and which ones are substantially missing. The experimenter may choose from a huge database of conditions, each with an associated unique tuning based on the obvious symptoms reported in a case or based on his intuition about what he feels may be important. He or she does that by a tuning process that is something like rotating a knob on a radio set looking for a resonance. At the end, the experimenter selects a set of tuning numbers that designate which of the modules will be needed for healing.

The Radionics Machine's second component is the healing component. At this stage the current IDF is now allowed to interact and be healed by each of the modules selected by the experimenter's analysis. Here again, the experimenter has much choice in selecting many of the variables based on his sensitivity, which is in a way connected to his intuition (e.g. time of healing of each session, time between sessions, number of healing sessions and so on).

The major mystery is once again the nonlocality of the IDF of a living object. In quantum science, during evolution, consciousness uses the morphogenetic field to inject universal software of biological functions as the physical organ forms evolve. Subsequently, the process of individual living introduces an individual component to the universal software with a range of healthy variations. This you can think of as personal vital software. Living situations change, for example, seasonal change. So the software is a combination of available creative movements (this is called yin) and the most likely movements (this is called yang). Health is maintaining a yin-yang balance. Lack of balance is lack of health.

In quantum science, analysis is about finding out the "frequencies" that are missing for perfect balance. And healing is to replenish the living system with the missing frequencies and restore the balance.

The vital software is nonlocal; the correlation with the physical hardware (both biochemical and bioelectric) is mediated by consciousness. When correlated with the vital, the whole system (physical plus vital) becomes quantum and nonlocal.

Presenting a photograph of the system acts as a trigger to ensure nonlocal correlation of the system's bioelectric field plus quantum vital modulation (IDF) with the Radionics Machine's electromagnetic waves.

Subsequently, when the living system such as a plant is healed, the healing of the hardware/software of the plant is nonlocal. The effect of the healing will show up in the field of

the living objects. For agricultural applications, since crops in an entire field are correlated with one another, the entire IDF can be presented to the machine via one photograph of the whole field of crops.

First, we want you to notice how similar the process is to how a chi gong master can heal a sick plant. He first energizes his palms and then passes his energized palms over the area he wants to be healed with healing intention.

Second, the actual healing using chi gong requires many sessions. How much commitment on behalf of the healer does that necessitate? Here the machine, through a program written by the experimenter, can repeat the healing for a very long time. In this way, mechanization does have its benefits.

4.2. The Role of the Pyramid

According to quantum science, the pyramid shaped solid structure is an inanimate being and cannot be correlated with vital software. So it is not a source of vital energy that people experience when sitting in meditation in such a structure.

The source is the vast nonlocally connected biota all around us. The *pyramid and other such structures of sacred geometry help to facilitate our connection to that cosmic prana*; they act as amplifiers. We can theorize that our remote ancestors millennia ago, when we were in the so-called anthropological era of the vital mind and were nonlocally connected into tribal consciousness of large communities, did a lot of invocations of cosmic prana using such forms of sacred geometry. In this way, sacred geometries became codified as amplifiers of

cosmic prana; and this became the nonlocal memory of the collective unconscious.

Now, we will address the specifics of each of the experiments.

4.3. Preservation of Tomatoes

Why do tomatoes age and die once harvested? Because of the lack of fresh supply of nutrients to continue making hardware and vital energy for the software. Cold storage solves the deterioration by slowing down the cellular functions.

Even at room temperature, nutrition is actually available to a tomato in the form of the dead cells. But to use it for nutrition, the tomato needs a fresh supply of vital energy for creatively adjusting the existing software to new food. This the tomato by itself does not have once it is disconnected from the plant. In this way, tomatoes become way unbalanced with too little creativity (yin) and too much conditioning (yang).

Anil conducted an experiment in preservation of tomatoes by balancing the vital energy fields of sample sets of tomatoes in natural environments, without artificial weather control, by supplying them with fresh quantum possibilities of vital energy movement so the tomato could use the nutrients still available to it (in the form of dead cells).

According to quantum science, in the vital world nonlocality easily prevails. In this way, the biota of the living earth has a collective consciousness connection called Gaia. In the same way, we theorize that the biota of the whole universe are connected nonlocally in potentiality ^[8] and the vital movement software

of the entire cosmic biota is potentially available to all living beings. How we living beings connect to it is through a phenomenon called resonance.

In physics, resonance is frequency matching-when two objects vibrate with the same natural frequency, their amplitude of vibration increases dramatically. It is an entirely local phenomenon mediated by material interactions between the two vibrating objects. In the vital, something like a resonance takes place but through nonlocality, via the intermediary of consciousness in its archetypal aspect. And that archetype is wholeness.

A tomato taken off its mother plant lacks wholeness and creating consciousness (quantum unconscious) cannot connect to it any longer. It can live on the strength of the software it already has for a short time. But as the hardware deteriorates, the software cannot fully operate its functions and this produces degeneration and eventual death.

We human beings, however, can help the tomato with our intentions. But it is not as easy as it is with healing another human being. For another human being, all we need to do is to provide healing energy until the person's placebo is rekindled. It is self-healing thereon after.

The tomato's vital software is not designed to operate at the level of individual self. In this way, to revitalize a tomato we have to intend for its healing on an ongoing basis and also focus new vital energy on it, which is not practical.

What we can do is help focus the cosmic healing energy through the use of sacred geometry and we can send our intention through mechanical devices. It is these two aspects that make this method of regeneration practical.

A setup was created for focusing universal vital energy through pyramids; the healing intention of the experimenter was transmitted remotely in an ongoing way through a Radionics Machine.

How does sacred geometry work? A tentative explanation from quantum science is that these forms are part of our collective unconscious.

How does the Radionics Machine work? It is a commercial device. The makers claim that the device generates scalar electromagnetic waves predicted by the famous Nikola Tesla. This is highly controversial. We think the proponents are trying to push the idea that such a mysterious new wave form may be able to do other mysterious things like act as a carrier wave for vital energy waveform like ordinary electromagnetic waves can carry audiofrequency electromagnetic waves when sound waves are converted into EM waves. But this assumes that vital energies are material in nature.

If vital energies are nonmaterial as in quantum science, even the ordinary electromagnetic field of the Radionics Machine can propagate possibility waves of pyramid amplified cosmic vital energy via nonlocal correlation (quantum modulation). What produces the correlation? Consciousness does via the intention of the experimenter.

In this way, the entire process takes place in the following steps:

1. Cosmic vital energy in potentiality is focused and amplified by the sacred geometry of the pyramid;
2. The intention of the experimenter puts this wave on the “piggyback” of ordinary electromagnetic waves generated by the Radionics Machine, along with all the other suitable IDF in its storage; the piggyback of the Radionics Machine worked better than direct attempts to use the healing energy.
3. A computer program devised by the experimenter sets up a symbolic mechanical system that propagates the vital energy and the healing intention to the desired target at regular intervals.

4.4. What is the Quantum Science behind the Reviving of a Barren Agriculture Field without Infusing Chemicals?

Agricultural land’s most important asset is its topsoil. Since it is full of nutrients and moisture, life is always growing there. Topsoil is correlated with living energies on an ongoing basis.

When does such land become barren and refuse to grow anything? It is a combination of ongoing drought and neglect that would create these conditions. The fastest way of making such land grow again, when water is

not a problem and somebody is willing to replenish nutrients in it and provide the seeds to grow, is to get topsoil. But of course, that is quite expensive.

This second experiment was to investigate if the pyramid sacred geometry plus a Radionics Machine combination could replenish the land without importing fresh topsoil. All the soils needed, other than water and nutrients, were the replenishment of vital energy. As explained above, the soil is analysed first to find out which parts of the vital software are missing. Then the soil is healed when these missing software pieces are added from the memory banks of the Radionics Machine. Additional vital energy came from the cosmos while the sacred geometry helped to amplify the energy and the Radionics Machine provided the physical carrier wave to provide the local interaction needed to correlate the soil to the vital energy of the growing life.

4.5. Is There a Quantum Explanation for the Third Experiment?

The explanation of the third experiment boils down to answering the question, “can we make rain happen with the power of intention made into a repeatable mechanical ritual?” In the affirmative. Is it possible? Yes. In quantum science, these events fall into the category of events of synchronicity: you intend seriously, and consciousness resonates with your intention, the intended outcome happens.

For obvious reasons, of all scientific explanations using consciousness, this one is the most unsatisfactory because when all is said and done, this is no better an explanation than the old spiritual explanation of “Divine

Grace.”^[10] Saying this neither negates the explanation nor negates the importance of repeating the experiment, which is to establish a ritual.

Therefore, we declare: we shall engage in many more experiments of this particular kind to establish the causal efficacy of the ritual that was developed.

5. Interesting Implication: Can We (Human Beings) Live without Food?

The tomato experiment leads to a question of very far-reaching consequence. Examine once again the sum and substance of the tomato experiment. We kept the tomatoes alive simply by supplying them with creative vital energy. Every complex living object has plenty of nutrients in its own body due to its own dead cells; and it is an ongoing supply. The only thing that lacks is the creative vital energy needed to change the living software as needed. In the experiment these vital energies were provided by the cosmic vital energy amplified by the pyramid sacred geometry and transmitted via the Radionics Machine.

Many years ago, Dr. Goswami had a wonderful opportunity to participate in a documentary on the question of breatharians: people who live simply on their breath. There really is a lot of data supporting the claim that it is possible to live just by breath, no food. In the documentary, Dr. Goswami had equivocated: he did not know this phenomenon of autophagy, about dead cells of one's own body providing nutrients, the essential amino acids, and all that he has come to know now.

Now we have come full circle. If tomatoes can be left alive after they are picked from the vine

with a supply of vital energy and no food, so can live a human being who has a built-in supply of vital energy via the process of breathing. Ordinarily, we do it without paying attention and making no creative intention. However, there is plenty of evidence to suggest that breathing exercises called pranayama can and do elevate breathing to be a creative exercise.

We shall elaborate. Ordinary breathing is involuntary; it better be that way. Pranayama is voluntary breathing; paying attention. As the oxygen enters our body and moves between the organs and the organs begin to function, if we don't pay attention, consciousness collapses the most probable conditioned vital software, a movement that we call yang, the conditioned movement. When we bring attention into the breathing process and make this into a vehicle of do-be-do-be-do of the creative process, we invite creative software, the yin to collapse, as needed.

In this way, the breatharians could be doing something like aware breathing—pranayama—part of the time, that enables them to use the available food of dead cells and live. In fact, they could live quite long this way, because pranayama slows our organs down, the cells could divide their allotted fifty times (Hefflick effect) but taking longer.

6. Conclusion

In this paper we have shown how the famous but controversial Radionics Machine works without violating any laws of science, if by science we mean the newest paradigm of quantum science. Even without a physical explanation, thankfully independent

researchers have used the machine for healing crops and few other things keeping the interest alive. We certainly hope that our work will encourage more research and more industrial application of the machine, especially in the combination of sacred geometry of pyramids plus radionics.

The research reported here using this combination is equally significant. It gives us new important technology, a new industrial level use of vital energy whose efficacy has so far been engaged only in health and healing such as Ayurveda, TCM, and homeopathy.

The tomato research also raises the tantalizing question of living by breath. On a planet where hunger still is a haunting problem, this may be

a viable alternative for survival. Also, there is a huge segment of the population in affluent countries who engage in dieting. This living the breatharian way from time to time certainly creates a highly healthy alternative way to diet than the very questionable diet food people try most often unsuccessfully.

Finally, and most importantly, we hope this work goes a long way to establishing the viability of quantum science and the worldview it gives to advance human life and civilization.

This paper is in partial fulfilment for the requirement of the Doctor of Philosophy degree in Quantum Science of Health, Prosperity and Happiness, for Anil Kumar Sinha.
